DOT BRIDGE INC.
A SECURE SERVER STORY

A message from **firehost™**

Dot Bridge
.com

Overheard

“We build ecommerce websites, and it is our responsibility to help protect our customers’ businesses as well as our own, even on a budget.”

Company Background

Security and Internet marketing company Dot Bridge provides secure e-commerce website development. The company helps businesses of all sizes succeed by implementing online shopping technologies that are powerful, secure, and easy to manage.

Business Challenge

- Payment Card Industry Data Security Standard (PCI DSS) guidelines govern many of Dot Bridge’s business rules, however all previous web hosting providers Dot Bridge engaged offered inadequate security infrastructure and almost no support for security issues.
- Achieving compliance with previous web hosts was impossible.
- Dot Bridge needed a hosting provider who could deliver strong, reliable security and support at an affordable price.

Solution

- FireHost’s Secure Server provides Dot Bridge a secure hosting environment, one that owner and CISSP, Jeff Allain, finds to be superior to the level of protection you’d find in many major corporations.
- FireHost extends Dot Bridge’s capabilities by truly partnering with the ecommerce development firm to continuously monitor and prevent potential vulnerabilities from becoming a problem.
- Reactive, knowledgeable support engineers have successfully resolved every inquiry – even if it required adding resources quickly in response to a sudden traffic spike or in preparation for a planned event.
