

**LOGLOGIC**  
A SECURE SERVER STORY

A message from **firehost™**

## Overheard

“We sell security appliances. If our website isn’t secure, how can our customers trust that the products we sell are secure?”

## Company Background

LogLogic is the leader in log management and security event management solutions. They offer a comprehensive suite of products to help users achieve regulatory compliance, protect valuable company and customer information, and improve the efficiency of IT operations. The company is currently working with more than 200 partners worldwide and has over 1,000 customers using their products.

## Business Challenge

- When CMO Bill Roth began working with the company in early 2010, LogLogic’s website was operating with outdated technology developed more than a decade ago.
- LogLogic was looking for hosting that was affordable, fast and most importantly, secure.
- Scalability was a huge concern for LogLogic. They needed a hosting solution that would work during peak times when there was a large announcement or a new product launch and scale down during slower periods to preserve the budget.

## Solution

- FireHost worked with LogLogic’s needs to devise a scalable, flexible hosting solution that also addressed LogLogic’s security concerns.
- Working with FireHost has helped LogLogic to eliminate third-party consultants and other costly IT overhead. Ultimately, working with FireHost has saved the company more than \$17,000 per quarter.
- LogLogic believes the services provided by FireHost can help take their business to the next level.
